

Embalmer Survey 2023: Over 75% Are Still Seeing Novel White Fibrous Clots Not Seen Before The Covid Vaccine Roll Out

TRUTH11.COM

Jan 11, 2024 1 min

Q5: What percentage of the corpses in the Year 2023 that you have embalmed have had the large whitish "fibrous" structures/clots? (Please select only one answer.)

Steve Kirsch | Substack.com

The good news is that in 2023, just 20% of cases had these novel clots, down from 30% in 2022.

The CDC and FDA are still ignoring this. They still don't want to know, though **nearly 80% of the embalmers surveyed** are reporting seeing them.

Subscribe

These clots were **never seen** before COVID and after the COVID jabs, even more embalmers noticed them.

The data

The latest Embalmer survey (2023) (269 embalmers)

EmbalmerSurvey2023

EmbalmerSurvey.pdf • 89 KB

Thanks to Tom Haviland, a retired USAF officer, for doing the survey.

Summary

The jabs are still killing massive numbers of people.

It seems highly likely that most of these cases are caused by the COVID vaccines.

20% of deaths is roughly around 600,000 Americans a year.

The mainstream medical community, mainstream media, the FDA, CDC, NIH, and Congress are all still doing nothing to investigate the issue and determine which are jab related and which are not.

600,000 American deaths a year and nobody cares.

What is it going to take to get their attention?
